

Divya Kaushik

Software Engineer

✉ divya.kaushik1010@gmail.com

🏠 CA, USA

Profile Summary

Software engineer with 9+ years of experience designing, architecting, and shipping production web applications in Angular, React, and TypeScript, including full ownership of codebase architecture, greenfield technical builds, and mentorship of engineering teams. Currently deepening skills in 3D graphics and spatial computing (Three.js, Unity, AR fundamentals) ahead of graduate study.

Work Experience

Lead Frontend Developer, *Perse*

London, UK Oct 2024 – Jan 2025

- Led a 5-engineer frontend team, owning architectural consistency, code quality, and delivery across multiple Angular applications.
- Designed a comprehensive interactive Mapbox-based geospatial visualization tool from scratch as a greenfield R&D initiative.
- Designed UI/UX in Figma end-to-end and translated designs into production-grade, responsive Angular components.
- Established code review standards and mentored team on Angular architecture, state management and testing patterns
- Served as primary technical POC between frontend, backend, and product leads, shaping implementation decisions on all systems

Senior Frontend Developer, *Playtech*

London, UK Feb 2020 – Sep 2024

- Served as Senior Developer and Scrum Master on Playtech's NextGen Team, a greenfield initiative to rebuild the existing application from the ground up in React 18 - partnering directly with Tech Architects on core architectural decisions, from state management patterns to module structure.
- Built high-quality interactive Bingo games using React, TypeScript, and Pixi.js (WebGL rendering), and developed the platform's Jest testing framework from scratch to enable test-driven development across the team, establishing testing patterns that didn't previously exist on the project.
- Mentored junior developers through code review and pairing, focusing on React/TypeScript best practices and conventions for the new architecture.

Technical Consultant, *HCL Technologies*

Noida, UP, India Jul 2016 – Sept 2018

- Project - T-Mobile: Served as Lead Developer and Scrum Master, leading a team of 9 across B2B/B2C platforms and spearheading a greenfield website - building a production-grade Angular application from wireframe through delivery, collaborating directly with the client on requirements and technical approach.
- Project - iGovern Mobility: Built the frontend for PhoneGap applications (Apache Cordova, JavaScript) for a UK law enforcement mobility solution, and contributed to the research team migrating the application to Angular.

Software Engineering Analyst, *Accenture Services*

Bangalore, India Sep 2014 – Jul 2016

- Worked as a full-stack developer across multiple clients and as lead developer on 5 projects, building client portal sites on Java Struts, JavaScript/jQuery, and MySQL; independently handled a Record-to-Report (R2R) project for Microsoft end-to-end, from requirements through delivery.
- Interacted directly with clients to gather and analyze requirements, and trained and onboarded new team members on project context and technical standards.
- Served as key resource for the team's SharePoint site, organizing pages across multiple teams, and built an internal automation tool, 'Inventory Management,' to streamline business processes - recognized as Top Contributor for the initiative.

Projects

Island Portfolio [GitHub](#) [Website](#)

- Built a real-time 3D interactive portfolio with React Three Fiber, Three.js, and Zustand, implementing declarative scene graphs, centralized state management, and a custom third-person camera controller.
- Cut GLTF asset payload 85% (350MB→52MB) via a Draco-compression pipeline (glTF-transform), reducing load times without sacrificing geometry fidelity.
- Built a responsive, aspect-ratio-aware camera system computing dynamic frustum distance per frame to eliminate viewport clipping across device sizes.
- Debugged a silent tone-mapping failure in the post-processing render pipeline (EffectComposer swallowing renderer props), resolving cross-platform color-rendering defects on iOS/Android.

AR Spatial Measure [GitHub](#) [Website](#)

- Built a browser-based AR measurement tool letting users measure real-world distances/areas with no app install, using WebXR hit-testing on mobile and desktop.
- Architected state management across React Three Fiber's custom renderer and the DOM UI layer, solving a cross-reconciler bug that's a known pain point in R3F/XR apps.
- Deployed and shipped to production on Vercel; tested across Android and iOS Safari WebXR support

Royal Run [GitHub](#) [Website](#)

- Shipped and published an endless runner game on itch.io with public source on GitHub.
- Redesigned core movement from timed swipe-nudges to discrete lane-snapping after identifying a gameplay bug that let players drift back into obstacles - improved game feel and fairness.
- Migrated input handling to Unity's new Input System after diagnosing a silent failure in legacy Input under Active Input Handling.

Skills

Languages: TypeScript, JavaScript, Java, HTML5, SCSS/CSS3

Libraries and Frameworks: React, Redux, Angular (2-17), Three.js, Pixi.js, Tailwind, Node.js, Mapbox GL

Testing: Jest, Chai.js, TDD

Tools and Platforms: Git, Bitbucket, Jenkins, JIRA, Figma

Game/AR Development: Unity, C#, AR Foundation, WebGL

Education

Middlesex University, London | MS in Computer Science | Distinction: Grade 1

Sep 2018 - Dec 2019

UPTU, India | B.Tech in Computer Science | Passed with Distinction (Div 1)

Sep 2010 - Jun 2014

Certifications

Accenture Agile Professional [\[Certificate\]](#) Dec 2015

Oracle Certified Java Professional [\[Certificate\]](#) July 2015

Microsoft Certified Solutions Developer (MCSD) [\[Certificate\]](#) Apr 2013

- Programming in HTML5 with JavaScript and CSS3 (70-480) [\[Certificate\]](#)
- Essentials of Developing Windows Store Apps using HTML5 & JavaScript (70-481) [\[Certificate\]](#)
- Advanced Windows Store App Dev using HTML5 and JavaScript (70-482) [\[Certificate\]](#)

Awards & Recognitions

- Accenture Celebrate Excellence (ACE) Award - Delivering High Performance, 'Work Smart' category.
- Accenture Outstanding Service Award - recognized by Factory Lead for performance and business impact.
- Top Implementer, Continuous Improvement Idea - Accenture, Oct 2015
- Certificate of Appreciation - HCL Technologies, May 2018
